

#### **Product Descriptions**

• The product is the latest PMSM(Permanent Magnet Synchronous Motor) controller made by Wuxi Lingbo Electronic Technologies Co.,Ltd, which can output 4000W power. It's designed with FOC(Field Oriented Control) algorithm in which SVPWM is used to drive the power device so that it injects sinusoidal current to the three-phase of motor. Meanwhile, we use a 32-bit microprocessor which integrates the latest ARM core, it exhibits excellent operational capability and task processing ability. The system can handle several close loops which include torque, flux, speed loop and other high demands of real-time task operations at the same time. Through these control methods, the system can achieve the following performance: maximum torque control, constant power control, speed closed loop control and energy feedback control while braking. Compared with traditional DC motor (BLDC) controller, the PMSM controller has significant advantages as follows:

#### **Comfortable driving**

• Direct torque control, smooth start-up, excellent acceleration performance, especially in medium and high speed stages, which approximates to the performance of fuel motorcycle.

#### Super low noise

• Vector control sinusoidal current injection and smooth motor output torque, which fully suppresses the low frequency noise caused by the fluctuations of motor torque.

### Flexible configuration

- Provide PC software(GUI), by which can configure hundreds of parameters, so will improve the flexibility of on-site application.
- •Monitor the operating status in real-time.
- Have UART(standard equipment) or CAN BUS, Bluetooth communication interface(user option).
- •Make the function interfaces of different types of products compatible.

### **Perfect protection functions**

- Have Signal integrity detection(e.g. motor interface signal, control signal, etc.).
- With Over-current protection, over or under voltage protection & over-heat protection.
- Provide motor temperature-control interface.

#### **Key features**

- On-site parameters setting & provide PC software
- •Self-checking function after system power-on
- •Energy regenerative braking
- •Brake, cruise, and 3-modes speed selection port
- •Integrate waterproof terminal port
- •PWM output port
- Display port
- •LED indication for operation and fault status
- •Ultra-thin shape design, to be installed inside the vehicle easily

### **Applications**

- •Electric scooter
- •Small electric vehicle
- •Electric golf vehicle
- •Electric Sightseeing vehicle
- •Electric boat

## **Specifications**

| Maximum Ratings & Main parameters |                                     |  |  |  |
|-----------------------------------|-------------------------------------|--|--|--|
| Rated Input Voltage               | 48V/60V/72VDC                       |  |  |  |
| Max Input Current                 | 180A                                |  |  |  |
| Max Output Current                | 420A                                |  |  |  |
| Rated Output Power                | 4000W                               |  |  |  |
| Operating Temperature Range       | -20°C~+90°C                         |  |  |  |
| Storage Temperature Range         | -10°C^+40°C                         |  |  |  |
| Motor Control Mode                | FOC (Field Oriented Control)        |  |  |  |
| Standby Power Consumption         | 20∼40mA                             |  |  |  |
| Max. Motor Speed Limitation       | Depended on Motor and configuration |  |  |  |
| Driving Method                    | Torque Loop Control                 |  |  |  |

| Systen  | LED Blinking Times   |    |
|---|--|----|
| Over-voltage protection   | Battery voltage is higher than default value                 | 1  |
| Under-voltage protection  | Battery voltage is lower than default value                  | 2  |
| Motor over-current protection   | Motor phase is short-circuit or phase to B+ is short-circuit | 3  |
| Stalling protection   | Motor stalling time is over default value                    | 4  |
| Hall Sensor protection  | Hall input is abnormal                                       | 5  |
| MOSFET protection   | MOSFET self-checking is abnormal                             | 6  |
| Phase winding disconnect protection   | One of the motor phase is disconnection                      | 7  |
| Self-checking error protection  | Self-checking is abnormal if internal system power-on        | 10 |
| Controller over-heat protection Controller operation temperature is higher than default value |  | 11 |
| Throttle protection   | Throttle input is abnormal                                   | 12 |
| Motor over-heat-protection  | Motor Temperature is higher than the value of configuration  | 13 |

Wuxi Lingbo Electronic Technologies Co.,Ltd.

Add: Building 10, JiaoTong University Creative Park, No.59 Xiuxi Road, Binhu District, Wuxi, PR China

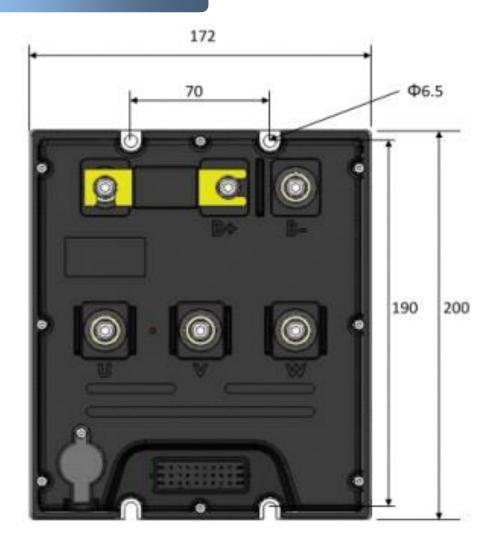

| Throttle non-Idle state Protection | The throttle is not in the idle state when System Power | 14 |
|------------------------------------|---|----|
|                                    | On  |    |
| Braking indication                 | Indicating Braking Mode                                 | 15 |

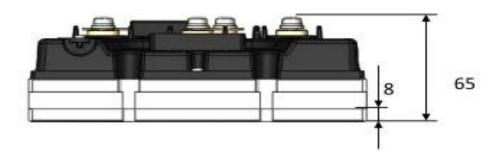

| Communication Characteristics |   |  |  |  |
|-------------------------------|---|--|--|--|
| GUI Tool                      | TTL interface: parameter configuration and working state          |  |  |  |
|                               | monitoring(optional function)                                     |  |  |  |
| RS485 Communication           | RS485 interface(optional function)                                |  |  |  |
| CAN Communication             | CAN interface (optional function)                                 |  |  |  |
| Bluetooth Communication       | Bluetooth wireless interface: parameter configuration and working |  |  |  |
|                               | state monitoring(optional function)                               |  |  |  |
| LED Indicator                 | Indicate current working or fault state                           |  |  |  |
